DETAILED ACTION

Specification

1. The disclosure is objected to because of the following informalities:

On page 3, line 19 and page 4, line 23, the specification refers to the invention of "claim 1", and on page 4, line 8, the specification refers to the invention according to "claim 2". However, the use of claim numbers in the specification is objectionable, because during the prosecution of an application the numbering of the claimed invention is often changed, for example by the cancellation of original claims and presentation of new claims of a different scope, or by renumbering at the time of allowance. The specification should be amended to describe the present invention without utilizing claim numbers.

Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by U.S. Patent No. 5,714,195 to Shiba et al. Shiba discloses a method for repairing defects in a color filter comprising the steps of removing a portion of a filter element having a foreign substance therein by utilizing a laser beam, and discharging a hardening resin

Art Unit: 1756

containing a dye or pigment from an ink-jet head onto the portion from which the foreign substance has been removed. See the abstract, column 11, line 61 to column 12, line 9, and Figures 10A-10D. Therefore, this invention is not novel.

Allowable Subject Matter

3. Claims 2-4 are allowed because in a method for correcting defects on a color filter comprising the steps of setting a diameter of a laser beam on a circular correcting region including a defective portion when the defective portion of a color filter is removed by irradiation of a laser beam, and depositing material to the circular correcting region after the circular correcting region has been removed, the prior art does not teach or suggest the embodiment wherein the depositing step comprises depositing a metal film by laser CVD method.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to John A. McPherson whose telephone number is (703) 308-2302. The examiner can normally be reached on Monday through Friday, 7:30 AM to 4:00 PM.
